

Hako-Citymaster 1200 CityCleaner

The Hako Citymaster 1200 has been tailor-made to meet the high demands placed on professional street and footpath cleaning. As an articulated compact sweeper it also ensures thorough cleanliness, even where space is limited. At the same time the machine concept guarantees the highest possible efficiency and economy for the operators.

Once again the possibilities for using the Hako Citymaster 1200 have been extended even further with the new attachment scrubbing deck (option). In combination with clean water, the scrubbing deck ensures via rotating brushes that town centres, multi-storey car parks, underground car parks or market squares shine in a completely new light.

The scrubbing deck with a working width of 1,330 mm is equipped with 3 brushes. Various brushes are available depending upon the application.
